

## Acronis Hard Drive Image Backups

- A full hard drive image will be created each week to the customer's own external hard drive, Network Attached Storage (NAS), or Storage Area Network (SAN) unit
- Incremental file changes will be performed each day and added to the full backup
- The backup image can be encrypted with up to 256-bit AES encryption
- Individual files can be restored easily. The full image can be restored to a replacement hard drive or new computer
- Backup files can be automatically sent offsite in an encrypted tunnel.
